Pillar on Male Sexual Disorders. DISEASES OF THE SEXUAL SYSTEM IN VENEREAL AND GENITO-URINARY DISEASES. New York: Fourcotte Medical School. In one very handsome octavo volume of 236 pages, with 25 engravings and 8 full-page plates. Cloth, \$1. Philadelphia: Lea Brothers & Co., Publishers. 1905.

This book contains seven chapters, as follows: Anatomy, Physiology, Pathology, Clinical Features, Differential Diagnosis, Treatment and Prognosis, and Illustrative Instances. In this work the author correctly says that the anatomy, which lies at the foundation of all medical action, should properly precede any discussion of a subject, and proceeding therefrom, the physiology and pathology follow in logical sequence. The book, which is a valuable one as far as it goes, seems to be devoted much more to diseases of the vesicle seminales than to any other affection, and, strictly speaking, its title should be sexual disturbances in the male with incidentally the anatomy, physiology and pathology of these diseases of some of the organs connected therewith. For specialists the book will be an instructive one, and the latest illustrations giving all the operative methods for the treatment of vesiculitis will be very interesting. The history and methods of incisions for operations on the vesicle seminales are given, but all those familiar with the literature of the subject, and especially with the work of Hoesel and Terrillon, on diseases of the testicle, published in Paris in 1895, will not be comparatively little on the general subject with the exception of the operative measures named, has been added. The disease of the testicle are hardly mentioned in the book, and then only incidentally. We trust that should the work pass to a future edition, the author will change the name, or have it include the diseases of the testicle. As a monograph on vesiculitis, it is without doubt the most comprehensive of any.

Hare's Text-Book of Practical Therapeutics. A TEXT-BOOK OF PRACTICAL THERAPEUTICS. With Special Reference to the Application of Rational Measures to Disease and their Employment upon a Rational Basis. By HARVEY ABRAM HARE, M.D., Professor of Therapeutics and Materia Medica in the Jefferson Medical College of Philadelphia. With special chapters by FRED. D. R. SCHEWENITZ, EDWARD HAYES and CLAYTON C. HARR. New (5th) edition, thoroughly revised. In one octavo volume of 720 pages. Cloth, \$1.25; leather, \$1.75. Philadelphia: Lea Brothers & Co., Publishers. 1905.

As this book has now passed to its fifth edition, it needs no special commendation on the part of the writer of this notice. The revision has brought the book down to date. Each article has been revised and the antitoxin treatment of diphtheria has been introduced. The author mentions with approval that the "gross percentage of mortality without taking favorable cases alone and including operative cases, range from 5 to 25 per cent, as against the ordinary mortality of about 50 per cent. The dose of the antitoxin serum is to be judged by its known strength and power, when conferring immunity, by the severity of the disease and the susceptibility of the patient. The present common dose of the antitoxin serum of Hehring and Parker, Davis & Co., is 10 cubic centimeters, while that of the strongest serum is much less. One valuable feature of this book is the penicillin table at the end, where doses of all the medicines are given in the metric system, as well as in the old British apothecary system.

Some of the Physiological Factors of the Diseases of Childhood. By ROBERT CARL O. In one 8vo. 89 pages. Cincinnati: Robert Clark Co. 1905.

This little book is a republication of a series of papers first published in the *Archives of Pediatrics*, and for the benefit of

those of our readers who have not seen that publication we give the following general synopsis of the contents: Chapter I, Normal Function of Nerve Cells; II, Physiologic Peculiarities of the Nervous System of Infancy from Childhood; III, Fever and Variable Temperatures of Childhood; IV, Heat Dissipating Mechanism; V, Autogenic and Bacterial Toxins; VI, Venous Condition of the Blood; VII, Improved Condition of the Blood; VIII, Reflex Irritation, and IX, Excessive Nerve Activity.

The author uses the term, "neurones of childhood," to cover all local and general nervous disorders which do not have any known pathologic lesions of the nervous system. It is thus seen that the title of the book is more comprehensive than its style and general make-up would seem to indicate. The paper contains the result of much original research. The chapter on auto-intoxication is alone worth the price of the volume.

Charaka Samhita. Translated into English. Published by ARYAN SAMITHA, CALCUTTA. 1905. Part III.

The thirteenth fasciculus of this interesting work has reached us, and on examination we find it completes the twelve groups of food and drinks. Lesson XXV is set forth very quaintly the difference between men that are wise and those that are ignorant and foolish. Lesson XXVI gives some curious observations on quackery: "Bad physicians or killers of life and helpers of disease." The good physician is thus described by the illustrious son of Asti: "Those that are well born, of clear understanding, possessed of experience, skillful of pure behavior, possessed of mastery over their hands, with souls under thorough control, equip with every necessary object, with every sense in order, capable of reading the disposition of others, furnished with knowledge of results (processes, operations, drugs, etc.) are said to be saviors of life and destroyers of disease."

Black on the Uterus. THE UTERUS IN HEALTH AND DISEASE, AND UTERINE ANATOMY, PHYSIOLOGY AND PATHOLOGY. A COMPREHENSIVE. By D. CAMPBELL BLACK, M.D., L. R. C. S., Professor of Pathology, Anderson College Medical School. In one 12mo. volume of 252 pages, with 25 engravings. Cloth, \$1.25. Philadelphia: Lea Brothers & Co., Publishers. 1905.

This book is an English printed one, for the use of students. It is very condensed, concise, well illustrated, and will be found extremely useful for those who wish to have in a small compass a recent work on the science of uterology. It has been carefully brought down to date and will be found a valuable book of reference on the subject. Practitioners will find it desirable to have a book handy for reference in the examination of specimens. The only defect in it, so far as our observation has extended, is that too little attention has been paid to the examination of urine for bacilli. The bacillus tuberculosus and bacillus uree are the only ones mentioned, and no specific directions for tests are given in the book, which we take to be a defect of omission, as in an authoritative work of this kind everything relating to the subject should be set forth.

Manual of Organic Materia Medica. HANDBOOK OF MATERIA MEDICA OF THE ORGANIC AND INORGANIC DRUGS. For the use of Students, Dispensaries, Pharmacists and Physicians. By JOHN H. MARSH, Ph.D., Ph.D., etc. Sixth edition, revised by HENRY C. MARSH, Ph.D. 376-378 pages. Philadelphia: Lea Bros. & Co. 1905.

This, as its name implies, is a manual or hand-book of materia medica, adapted to the use of medical students and students of pharmacy. The new Pharmacopoeia has been adhered to, and the doses are given in metric terms. Although the matter in the present volume has been increased by slight enlargements of the pages and condensing the bulk of the volume is not materially augmented. It will, as heretofore, without doubt, continue to be a favorite with students.
